

INCREASED FLEXIBILITY FOR YOUR FORK POSITIONER

Cascade offers Top Mount Hydraulics or Hi-Termination Hydraulics as options on most new K-Series Fork Positioner offerings*, improving access to hydraulics and ease of use.

Top Mount Hydraulics

Top Mount Hydraulics provide a single connection location on either the right or left side** for connecting a K-Series Fork Positioner. (55K-FPS shown.)

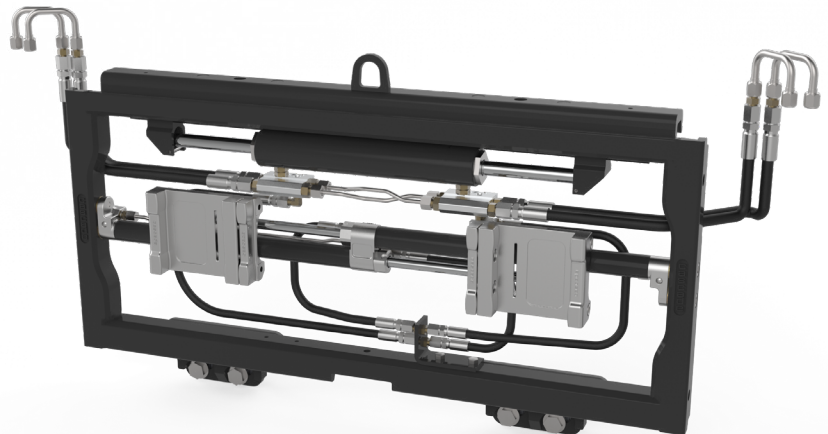

A bolt-on junction block is mounted above the top bar and hydraulic tubing is then routed to align with the end bar and then to the K-mechanism.

You can now order new K-Series Fork Positioners with Top Mount Hydraulics option for easy access and excellent visibility.

Hi-Termination Hydraulics

Hi-Termination Installation Kits allow top hydraulic connections for both the Sideshift and Fork Positioner. (55K-FPS shown)

The Hi-Termination option improves accessibility of hydraulic connections and ease of attachment installation.

*Available on New 55K / 65K / 100K models.

**Left or right side termination must be specified when ordering.
